

## Syllabus Template Statement

Generative Artificial Intelligence (Gen AI) refers to artificial intelligence systems that generate new content by identifying and mimicking patterns from the data sets on which they were trained. The [Generative Artificial Intelligence Policy for Teaching and Coursework](#) applies to all forms of generative AI tools, including but not limited to text generators (such as ChatGPT), image, video, or sound creators (such as Dall-E), and code assistants.

Instructors will determine the use of generative AI to produce, derive, or assist in creating any materials or content for coursework. Instructors retain the discretion to permit the use of generative AI in their courses to any extent they deem appropriate for achieving the learning objectives. When permitted, any text, image, or other content created using generative AI must be properly disclosed and cited in the submitted work. Unauthorized use of generative AI in coursework, or failure to properly disclose and cite its use when permitted, is considered a violation of the [Northwestern Qatar Academic Integrity Policy](#).
